

PRESS RELEASE

April 30, 2007 – for immediate release

What's new in DriveWorks?

Design Automation just got a whole lot easier

Thelwall Cheshire, UK April 30, 2007 – DriveWorks Ltd ships latest version of DriveWorks - Rules Based Design Automation Software.

Enhanced performance and stability underpin the latest version of the DriveWorks. The latest version includes 70% of all customer and reseller enhancement requests, plus additional features to excite DriveWorks Users old and new!

The DriveWorks Subscription Services Program provides a valuable communication forum for the DriveWorks Development Team. Because DriveWorks is generic software, all accepted enhancements are incorporated into the core product so that all users worldwide can benefit.

Ensuring that DriveWorks is easy to set up and easy to use are two of the underlying objectives of the Development Team. This approach has led DriveWorks to be the market-leading Design Automation product for SolidWorks.

The latest version was first made available to resellers through the DriveWorks Beta Program to ensure familiarization with the new features. The top 10 include:

1. Flex LM **licensing** from Macrovision to enhance security
2. **File Management Tool** integrated into the main product
3. Re-defined **User Interface**
4. New **Drawing Wizard** with graphic view indicator to aid selection
5. The DriveWorks **Rules Wizard** has been completely redesigned and new functionality added. The new Interface makes it easier to build, view and validate rules
6. Once a Rule has been built, the all new **Rules Intelligence** allows the DriveWorks Administrator to drill down into it to analyze and review how it will perform.
7. New **Form Editing Tools** make it even easier to create easy to work with Forms that can be used by the Administrator and others to enter their specifications.
8. New Wizard introduced to make adding and editing **Output Documents** much easier. Multiple document types can be driven.
9. **Specification Test** - Users can view their Forms, Navigation, the constants and variable used, as well as Analyze how they are used and the associated rules, the Documents associated with the Implementation, the Model Rules and Data Export
10. **DriveWorks Server** now monitors and coordinates SolidWorks behaviour to optimize performance during the model generation process.
